

# GoMo Health Community Concierge™

Automate the collection of health risk assessment data at health fairs, screenings and other community outreach events; creating opportunities for increased network integration and market share while reducing care delivery costs through early detection and education.

## Personalize Patient Engagement

The science and method of patient engagement is as important to outcomes as the clinical protocols themselves. BehavioralRx™, our proprietary science, leverages proven cognitive and psychological techniques to stimulate higher levels of reciprocity and action.

## Population Health Management

Collect patient data and generate reporting to improve coordination of care delivery across current and potential patient populations, while creating opportunities for proactive disease management and readmission reduction enabling more cost-effective care.

## Values

Maximize efficiency in participant registration and data collection by updating to an electronic, interactive process.

Electronically capture data for easy reporting both internally and externally (IRS, community benefit and education, state, JCAHO, etc.)

Build opt-in patient database enabling ongoing engagement opportunities and follow up with this captive patient population.

Measure increased awareness and utilization of clinical care offerings for cross marketing and measuring return on investment.

Continue to integrate technology driven solutions for community health outreach and education initiatives.
