

GoMo Health Discharge Concierge™

Provide patient access to state-mandated information they need to read, understand, and acknowledge receipt of prior to discharge, promoting self-activated learning, satisfying teach-back requirements, assuring print and oral health literacy, and automatically documenting completion in EMR.

Personalize Patient Engagement

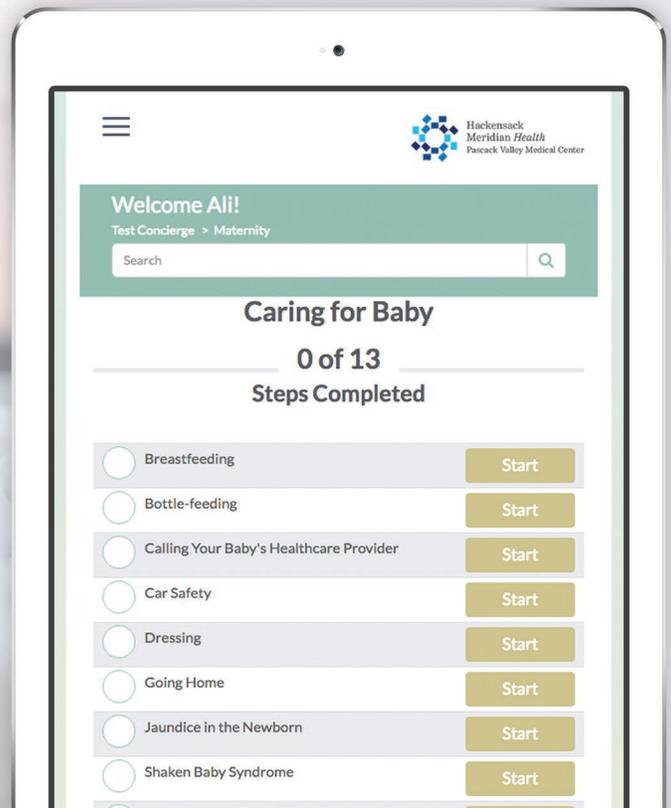

The science and method of patient engagement is as important to outcomes as the clinical protocols themselves.

BehavioralRx™, our emerging behavioral and cognitive science of personalized patient engagement, leverages proven psychological techniques to stimulate higher levels of reciprocity and action in-the-moment.

Activate Patients for Increased Compliance

In a fully automated yet highly personalized experience, patients navigate a plan of care designed to support *their* specific healthcare needs and automatically log completion to document JCAHO patient education requirements.

Research indicates activated patients are more compliant as they believe they have the knowledge and skills to properly manage their healthcare.

Values

Improve Population Health

Redefine the empowered patient by providing self-care management education that they control, navigate and self-complete.

Reduce Cost of Care

Give patients the key to independently access educational content at their convenience, freeing up nurses from overall content delivery while allowing nurses to answer specific patient questions.

Reduce Unnecessary Readmissions

Empowered patients have greater believability and trust in themselves - increasing their ability to self-care post discharge.

Increase Joy in Practice

Allow nurses to focus on direct clinical patient care with the flexibility to meet with patients 1:1 as needed to answer questions and satisfy teach-back requirements.
